ON BINANCE SMART CHAIN

Binance Smart Chain (BSC) was developed as a means of utilizing solidity-based smart contracts with much greater speed and efficiency than other, competing chains. With decentralized exchanges on BSC offering lightning-fast swaps and extremely low fees, BSC has started to become one of the most widely used blockchains for Decentralized Finance (DeFi). BSC uses a token protocol developed by the Binance Team called BEP-20. Known for 5 second block speeds much faster than doge with 1 minute block speeds.

These 2 articles compare block speed:

Doge 1 Minute:

Bep-20/BSC 5 seconds:

Advantages of the Binance smart chain are:

It's a proprietary blockchain, which will provide security and safety to all users and developers.

Its native dual chain interoperability will allow cross-chain communication and scaling of high-performance dApps that require a fast and smooth user experience. It's EVM-compatible and will support all of the existing Ethereum toolings along with faster and cheaper transactions.

Its on-chain governance with Proof of Staked Authority consensus, built on 21 validators who validate the transactions, will provide decentralization and enable significant community involvement
